The Trees Taking Root Across Northern Morocco

Across Northern Morocco, rural communities are investing in a more resilient future, one tree at a time. Across the 2022 to 2026 planting seasons, more than 1.19 million trees have been distributed to farmers, cooperatives, associations and schools.

Each tree begins its journey in a local HAF community-managed nursery, where nursery teams care for young seedlings before they reach the people and communities who will plant them. Once in the ground, these trees can support family livelihoods, strengthen agricultural resilience and contribute to healthier landscapes for generations to come.

Trees That Sustain Livelihoods and Thrive in Local Landscapes

Fruit trees play an important role in helping rural families diversify their income and build resilience. Olive trees account for the largest share of planting, with approximately 720,000 distributed, followed by carob (141,000), pomegranate (131,000), fig (127,000) and almond (58,000). Grape and walnut trees further diversify the mix, reflecting the importance of selecting species suited to local conditions and community needs.

Adapted to local growing conditions, these trees can help protect soil, support pollinators and provide fruit for household consumption and income generation. Over time, they can contribute to more resilient agricultural landscapes and more sustainable rural livelihoods.

Planting has reached communities across the North and Oriental regions, with the largest numbers distributed in Figuig (approximately 363,000 trees) and Guercif (336,000). Taourirt, Larache, Ouazzane, Chefchaouen, Oujda-Angad, Jerada and Berkane have also received trees, alongside communities in Driouch, Nador, Tetouan, Al Hoceima and Tangier-Assilah. Together, these efforts are supporting rural livelihoods across diverse coastal, mountain and steppe landscapes.

Help More Trees Take Root

Every tree planted is an investment in rural livelihoods, healthier landscapes and a more resilient future. By supporting fruit-tree planting, you can help farmers

diversify their harvests, strengthen their income and care for the land their families depend on.

There is more work to do, and more communities to reach. With your support, we can continue bringing locally adapted fruit trees to farmers, cooperatives, associations and schools across Morocco.

Plant More Trees
